

IT Strategy Consultant

Location: Noida

Role

- Support multi-disciplinary, complex consulting engagements for client based globally, working in a Private Equity setting.
- Design and Deliver programs for cost reduction/profitability, business strategy, technology transformation, organizational change management, and merger management in multiple domains.
- Understand client's current business capabilities, assess current organization structure, processes, and operating model including sourcing and delivery ecosystem, and conduct end-to-end value chain analysis to identify levers that can produce sustained improvement.
- Identify the strategic focus for the client organization and strategic blueprint for the development of organization.
- Define short-, medium-, and long-term objectives/goals for the client organization along with key metrics to measure improvement.
- Work with other IT experts to identify and design key short-term and long-term initiatives/solutions/resources aligned with the Vision to achieve identified goals
- Advise clients on technology options and help them make strategic choices and decisions such as Cloud vs On Prem.
- Propose and design the new organization structure, processes, and operating model including sourcing and delivery ecosystem to support plans.
- Identify target operating model and design the detailed implementation plan for same.
- Identify changes required in terms of tools/policies/processes, if any, aligned to the operating model
- Design the change management plan and migration plan to support the overall IT transformation.
- Support client in FTE sizing and detailing out the job descriptions to support the organizational changes (if required)
- Identify Key Performance Indicators (KPIs)/ Performance Measurement Parameters for Operating Model/Initiatives.
- Build a research repository and leverage for additional results and share it with colleagues as needed

Requirements

- Experience in IT Strategic Planning, IT Project and Program Planning and Management, Change Management, Formulation and Implementation of Target Operating Model for large IT Organisations.
- Consulting experience with an IT professional service “big 4” firm or similar background focused on IT strategy enablement
- Deep understanding of Organisational Governance Structures, Processes, and Operating Models.
- Knowledge of major cloud technologies including virtualization, containers, networking etc. on different cloud platforms

- Subject matter expertise in one or more of these domains - cloud computing, IT strategy, infrastructure, IT operations, applications, enterprise architecture, solution architecture, automation, data management, AI/ML, IoT and cloud governance models.
- Data modelling and analytical experience using common tools (e.g., Excel, Tableau).
- Issue-based analysis determined and structured data to collect, and produced structured conclusions, recommendations, and roadmaps.
- Awareness of broad competencies and depth in specific competency areas (IT strategy, enterprise architecture, solution architecture, process reengineering, automation)
- Ability to lead/facilitate workshops and interviews, great presentation skills.
- Good understanding of IT software licensing models and evaluation criteria.
- Ability to define vendor evaluation criteria, run RFPs, and support clients in selecting vendors.
- Experience in working with international clients across territories such as NA, EU is preferred.
